FOOD AND BEVERAGE

New kitchen concept

An ambitious project to build a pre-fabricated two-zone kitchen was been completed in Maré, New Caledonia, an island in the Pacific Ocean. The kitchen is used to prepare 1,000 meals a day for the children of Maré.

The construction was tested twice in France in 2003. The Maré kitchen was then pre-fabricated in France and shipped 22,000 km in eight, 12 m containers. Altogether it took three months to build the world’s most advanced kitchen. The kitchen combines excellent ergonomics for kitchen staff with the hygienic properties of stainless steel.
