

La Jolla

San Diego, USA

Terne coated stainless steel was utilized in this one-of-a-kind of residential project in La Jolla, California. What made this metal roof system particularly challenging was the building's geographical location. Sitting on an ocean-side cliff, the structure is constantly exposed to corrosive winds. Aperam's Uginox Patina K44 terne coated stainless steel was the perfect choice for the project, not only for its beautiful natural appearance, but also for its superb corrosion resistance in marine environments. Stainless steel's low expansion and contraction also made the roof's distinctive radial design possible.

Environment:	marine
Material:	Aperam K44 with Uginox Patina finish (EN 1.4521)
Manufacturer:	Aperam
Architects:	Daniel Schmidt
Photographs:	Enduringmetal
