New Street Station

Location: Birmingham, UK
Architects: AZPML

Highly polished 316 stainless steel gives a new look for the New Street Station in Birmingham, England. More than 8 000 bright polished, laser-cut panels of stainless steel, totalling 20 000 square meters, will form the façade of the station. Outokumpu has supplied approximately 400 tons of stainless steel for this cladding, which demonstrates how effectively stainless steel can be used to decorate standard utility buildings.

Details

- Environment: urban
- Grade/surface: 316/bright polished
- Date of completion: 2015
- Manufacturing company and material supplier: outokumpu.com
