Enclosures for airport buildings

Madrid, Spain

Terminal 4 of Madrid Barajas airport is known for its extensive use of stainless steel in technical equipment (baggage belts; rainwater drainage; ventilation). However, there is another dimension of stainless steel use which is equally important: enclosures. The glazed facade depends on Duplex stainless steel EN 1.4462. In the car park, stainless steel wire mesh, grade 316 (EN 1.4401) fulfills three functions: it ensures intrusion protection, provides ventilation and allows natural light into the building.
